6 1/2"	396.00	508.00

Contact us for any size not listed above and we will be happy to quote you.

We install new segments and "V" the old barrel. The retipped core bit will be better than when it was first purchased! The barrel must have enough wall thickness to support the "V"d segments.

Keep in mind: Diamond segments are not bullet proof. Using too much water and/or too much down pressure helps to remove segments!

Bit pictured above is without water ways. We can put in as many as we want, or you want.

Prices are subject to change without notice due to freight and inflation costs.
 We reserve the right to ship next higher quality product if we are out of stock.

Crowns cost more but are cheaper in the long run because they don't get 'ripped' off. Crowns core slower than conventional bit but they stay on if your coring pre-stressed concrete or a lot of rebar. 315 is .315 or segment height.

prices are subject to change without notice due to freight and inflation costs. We reserve the right to ship next higher quality product if we are out of stock.

Segment pictured above has no water ways. We will cut as many as we feel is the correct amount unless you tell us different.

Built with crowns that drill almost anything! The crown type segments have no wide gap holes like standard bits. Because of the lack of spaces, these bits will cut thru steel, rebar and prestressed cables. Will drill cured concrete, marble, granite, slate, flagstone, blue stone and much more.

Prices are subject to change without notice due to freight and inflation costs. We reserve the right to ship next higher quality product if we are out of stock.

This is the highest (1/2") crown on the market. No other company to our knowledge has one this high. Crowns do not have wide water ways as you can see. We can and do cut as many water ways as you need. This enables you to core thru pre-cast concrete cables or steel rebar without tearing off the segments like on a standard core bit. It cores slower than a conventional core bit because of all the "bearing" surface we have here. Will core cured concrete, marble, granite, slate, flagstone, blue stone and other components we are not at liberty to divulge.

Prices are subject to change without notice due to freight and inflation costs
 We reserve the right to ship next higher quality product if we are out of stock

Segment height is .395 which is more than the competition.
 Second the segment has a point which helps it get started.
 Third, our welds hold better than the rest, we have very little loss.
 Forth our life is far better than the rest, we get around 130 holes from a 3".
 Sure we have cheaper core bits, you get what you pay for.
 Barrel extensions are located on page CB-10

Prices are subject to change without notice due to freight and inflation costs.
 We reserve the right to ship next higher quality product if we are out of stock.

Our CD300 is a longer life core bit because of higher diamond concentration and different bond combine to make this a tough core bit to beat. professional coring contractors like this product because of the amount of holes they can drill.

This core bit has almost the same speed of cut as our Speedy Bit. The pointed segment helps to get the bit started.

Prices are subject to change without notice due to freight and inflation costs.
 We reserve the right to ship next higher quality product if we are out of stock.

CORE BIT BARREL EXTENSIONS

	LIST	Item#
1 ¼"	39.00	cdbe1.14
1 3/8"	39.00	cdbe1.38
