Contact us for any size not listed above and we will be happy to quote you.

We install new segments and "V" the old barrel. The retipped core bit will be better than when it was first purchased! The barrel must have enough wall thickness to support the "V"d segments.

Keep in mind: Diamond segments are not bullet proof. Using too much water and/or too much down pressure helps to remove segments!

Bit pictured above is without water ways. We can put in as many as we want, or you want.

Prices are subject to change without notice due to freight and inflation costs.  
 We reserve the right to ship next higher quality product if we are out of stock.
