8"	858.00	8-315c	449.00	8-315rc

Crowns are a continuous segment that we use to go thru steel cables and rebar. Crowns cut slower but they stay on, because they do not have the space between the segment to get caught on the cable or rebar. Just like standard segments, the higher the diamond concentration, the cost goes up but they grind thru the steel faster. We have taken our crowns to levels no other company has done. We have more types of crowns than any other company. With our 'Lock On' segment they stay on and don't come off. Small sizes; ie, 1/2" to 1" is where this type of bit is a big winner.

315 is .315 or segment height. **They have no .100 backer pad**
