7"	668.00	an7-250

Segment pictured above has no water ways. We will cut as many as we feel is the correct amount unless you tell us different.

Built with crowns that drill almost anything! The crown type segments have no wide gap holes like standard bits. Because of the lack of spaces, these bits will cut thru steel, rebar and prestressed cables. Will drill cured concrete, marble, granite, slate, flagstone, blue stone and much more. We can cut water ways into segment and or teach you how.
