The difference in (d) and (de) obviously is segment height. (de) is deceiving though because of higher segment height. (d) is the better blade because of diamond concentration and bond properties. So the bottom line is you want a blade that looks like a "killer" buy the (de) but if you want footage and performance buy the (d). All can be used on walk behinds with good performance. They all cut about the same as SUPER D PLUS below.
